

Florin-Sabin Sarca

 (+40) 730 852 355  florinsabin.sarca@gmail.com  [Linkedin](#)  [Github](#)  Bucharest, Romania

Fullstack Developer with 5+ years of experience in software development, specializing in building scalable and maintainable applications using React, TypeScript, Next.js, Angular, Node.js, NestJS, and Java/Spring Boot. Experienced in developing modern frontend architectures, responsive user interfaces, REST and GraphQL APIs, and backend services. Hands-on experience with React Native/Expo through a personal mobile application project. Experienced with automated testing using Cypress and Playwright, with a strong focus on code quality, reliability, performance, and maintainability. Experienced in working on complex, data-driven and enterprise applications, collaborating closely with cross-functional teams throughout the full software development lifecycle. Strong problem-solving skills and a solution-oriented approach, with a focus on delivering robust and user-friendly software.

Technical Skills

Programming: Javascript (ES6+), Typescript, Java, Python

Frontend: React.js, Next.js, Angular, React Native, Redux, HTML5, CSS3, SCSS, Tailwind

Backend: Node.js, NestJS, FastAPI, GraphQL, REST APIs, Spring Boot, Microservices, WebSockets, HTTP/HTTPS

Testing: Jest, Cypress, Playwright

Databases: Snowflake, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

DevOps/Cloud: Git, CI/CD, Docker, Kubernetes, AWS (ECS, EC2, S3, Lambda, Batch, Glue), Azure (Functions, Blob Storage, Virtual Machines)

Methodologies: Agile, Scrum

Tools: Jira, Bitbucket, Github, Postman, Figma, Confluence, VS Code, PowerShell, RabbitMQ

Embedded & IoT: NodeMCU, Arduino IDE, Pocket Geiger Sensor

OS: Linux, Windows, macOS

Soft Skills

Problem solving, Analytical thinking, Communication, Teamwork, Adaptability, Quick learner, Attention to detail, Time management, Proactivity

Languages

English (Professional), Romanian (Native)

Education

Bachelor's Degree in Computer Science

Faculty of Electrical Engineering and Computer Science

2017- 2021

Transilvania University of Brasov

Experience

Fullstack Developer — AQUASoft S.R.L.

Bucharest, Romania

AUG 2021- PRESENT

Remote/Hybrid

- Developed responsive web apps using **React** and **Next.js**, including multi-step workflows (auth, company setup, product config) for a hospitality/retail ERP platform.
- Built backend services with **NodeJS**, **NestJS**, and **GraphQL** across multiple client projects.
- Built booking/scheduling flows (e.g., real-time appointment countdowns) for a legal services platform using **Redux** and **Material UI**.
- Integrated Stripe payments and third-party services (POS, delivery providers), ensuring secure transactions and multilingual UI consistency.
- Worked with **PostgreSQL**, **MySQL**, **MongoDB**, and **Snowflake** for data modeling and API integration, including large-scale hotel data for a travel-tech platform.
- Wrote **Cypress** and **Jest** tests to ensure release quality; collaborated in agile teams (**Git**, **Jira**) delivering on **AWS** and **Azure**.

Professional Projects (AQUASoft)

Hotel Procurement Platform (USA)

DEC 2024- PRESENT

Enterprise platform used by corporate travel buyers and hotel suppliers to automate hotel sourcing, RFP creation, quotation, bidding, proposal management, and contract lifecycle management, processing data for 450,000+ hotels from multiple external sources.

- Developed frontend features using **React**, **TypeScript**, and **SCSS**, and backend microservices using **Node.js** and **NestJS**.
- Integrated third-party hotel pricing providers and processed large datasets using **Python**, **MongoDB**, **Snowflake**, and **Elasticsearch**.
- Implemented **REST APIs** and resolved cross-service defects, improving reliability, data consistency, and processing performance.
- Designed scalable ingestion, ETL, and full/incremental/on-demand synchronization workflows using **AWS Glue**, **Amazon S3**, **PostgreSQL**, and **Snowflake**.
- Redesigned Sabre rate acquisition by replacing searches across 60,000+ cities with proximity searches around ~5,000 major airports, cutting search targets by over 90% and substantially reducing API volume, processing time, and costs.
- Worked with **AWS** services to support scalable backend workflows and data processing.
- Contributed to platform stability through bug fixing, performance improvements, and production issue resolution.
- Collaborated in an international **Agile** team with developers, QA engineers, business analysts, and product stakeholders.

ERP Business Management Platform (Romania)

OCT 2023- DEC 2024

Large-scale ERP platform for hospitality and retail businesses, covering CRM, e-invoicing, loyalty, inventory management, self-ordering, and third-party integrations.

- Developed frontend features using **Next.js**, **TypeScript** across multiple business modules.
- Built reusable UI components and implemented complex workflows for authentication, company setup, product management, and business configuration.
- Integrated backend functionality through **GraphQL** APIs and collaborated closely with backend developers.
- Wrote end-to-end tests with **Cypress** and unit tests with **Jest** to improve application quality.
- Validated integrations with POS systems, delivery providers, and third-party services while ensuring multilingual support and UI consistency.
- Contributed to deployments and cloud-based development workflows using **Azure**.

Platform connecting clients with lawyers through lawyer discovery, appointment booking, and secure online payment workflows.

- Developed **React** frontend features for lawyer onboarding, appointment booking, and profile management, implementing complex multi-step user workflows.
- Built booking flows allowing users to schedule appointments by selecting meeting type, date and time, consultation details, and meeting format (phone, in-person, or online).
- Implemented the lawyer registration process, including profile verification, OTP-based email verification, account validation, and secure password setup.
- Developed appointment management features, enabling lawyers to view upcoming and past meetings, including real-time countdown updates before scheduled appointments.
- Contributed to **Stripe** payment integration and transactional email templates for user notifications and booking confirmations.
- Integrated **GraphQL** APIs, managed application state with **Redux**, built reusable UI components using **Material UI**, and wrote **Cypress** end-to-end tests for critical user journeys.

Personal Projects

AI Travel Companion (Personal Project)

APR 2026- PRESENT

Cross-platform mobile application that uses artificial intelligence to generate personalized travel itineraries and recommend nearby attractions.

- Developed the mobile application using **React Native** and **TypeScript**, implementing city exploration, attraction discovery, itinerary management, multilingual support.
- Built scalable backend services with **FastAPI** and **Python**, exposing **REST APIs** for **cities**, **locations**, **AI services**, and travel-related data.
- Integrated multiple **LLM providers**, including **Gemini**, **Groq**, and **Ollama**, to power AI chat, itinerary generation, image analysis, and multilingual travel assistance.
- Implemented a real-time AI chat using **WebSockets**, enabling persistent bidirectional communication between the mobile application and backend services.
- Built an automated data intake pipeline to collect, normalize, and process points of interest from **OpenStreetMap** and other mapping sources.
- Designed location-based search, nearby attraction recommendations, and navigation integration with **Google Maps**.
- Designed the backend architecture and managed application data using **PostgreSQL**.

Radiation Monitoring Platform (Bachelor's Project)

FEB 2021- JUN 2021

Full-stack platform for monitoring and analyzing radiation exposure using geolocation-based IoT sensor data and real-time visualization.

- Developed **Spring Boot** backend services exposing **REST APIs** for **IoT** sensor communication, data ingestion, and client applications.
- Built a **Angular** web application with interactive charts and heatmap-based visualization for real-time radiation monitoring.
- Integrated a **Pocket Geiger** sensor with a **NodeMCU** microcontroller to continuously collect and transmit radiation measurements.
- Designed the end-to-end communication flow between IoT devices, backend services, and web/mobile clients.
- Developed an Android application connected to the same backend APIs for mobile access to radiation data.
- Stored and queried large volumes of sensor data using **Elasticsearch** to support efficient search and visualization.
